The template given here is a basic template for preparing project report as per KTU guide lines. In this template first you have to change your project details such as your name, project name etc are in the preamble of your document %, just above \begin{document}. No need to make any more changes in main file except including new chapters. Your abstract, acknowledgment and chapters can be edited in the respective file stored in TeX_files folder. You can create any number of chapters in Tex_file folder and then included them in the main file. In Chapter 2, some useful environments and comments have been included. It will be convenient if you store all your necessary images in Figures folder. You can create a bib file and save it with .bib extension (Eg:- afzal.bib) and you can get the details of your referenced papers from google scholar.If you notice any discrepancies between these templates and the KTU' specs, please let me know by e-mailing afzal.study@gmail.com.
